

LAST YEAR, AMERICA SENT MORE THAN

\$

460,000,000,000

OVERSEAS FOR FOREIGN OIL.

ETHANOL FUELS AMERICA.

Right here in America, we already have what we need

to become more energy independent. Ethanol is grown here, made here, runs in the cars we already have, and creates jobs that can never be outsourced. In fact, a recent third-party study found that 136,101 jobs can be created if the EPA raises the allowable blend of ethanol just 5 percent. And the U.S. Department of Energy estimates that 10,000 to 20,000 new jobs are created for every billion gallons of ethanol produced.

Sources: Energy Information Administration (based on 2008 U.S. oil imports and average price per barrel); Windmill Group, LLC.

If the EPA raises the cap – allowing a gasoline ethanol

blend called E15 – we'll be making our air cleaner, our country safer and creating jobs that will help accelerate the innovation of cellulosic ethanol, the next generation of biofuels. Ethanol is ready to do more for our country. And America is ready to get its \$460,000,000,000 back. These are just some of the many ways ethanol works for America. To find out all the facts, visit GoE15.com.

Ethanol isn't just a fuel. It's a solution. Join us at GrowthEnergy.org.
