

USING 5% MORE ETHANOL CAN CREATE

136,101

MORE

AMERICAN JOBS.

The U.S. Department of Energy estimates that

ETHANOL FUELS AMERICA.

10,000 to 20,000 new jobs are created for every billion gallons of ethanol produced. And a recent third-party study by the Windmill Group found that 136,101 people can be hired if the EPA increases the allowable blend of ethanol just 5 percent. These are real jobs that can never be outsourced to another country. Important jobs that will help make us energy independent. Green jobs at modern plants that will foster clean, renewable energy, help

reduce greenhouse gas emissions, and strengthen

our country both environmentally and economically. These are high-tech jobs that we need right now to help launch the next generation of biofuels – cellulosic ethanol – joining the hundreds of thousands of Americans already working to help ethanol enhance our way of life. And the cars we have will run just as well with cleaner fuel. These are just some of the many ways ethanol works for America. To find out all the facts, visit GoE15.com.

Ethanol isn't just a fuel. It's a solution. Join us at GrowthEnergy.org.
